Anápolis – GO, Brazil | GitHub: github.com/helloAle

Professional Summary

Software Engineer with experience in project management, front-end and back-end development, and administrative operations involving data organization and analysis. Experienced in automating and standardizing internal processes through structured spreadsheets and digital tools, applying agile methodologies and software development best practices.

Technical Skills

Programming Languages and Back-end

- JavaScript, TypeScript, Node.js, Python, C++, C#

Front-end

- HTML5, CSS3, JavaScript, React

Databases

- PostgreSQL, MySQL

Design Tools

- Adobe Photoshop, Illustrator, InDesign

Productivity and Office Tools

- Microsoft Office Suite (Excel, Word, PowerPoint)

Professional Experience

Administrative Assistant

Municipality of Goianápolis, Goianápolis – GO, Brazil

2024 – Present

Responsible for automating and optimizing internal processes, including the creation of structured spreadsheets, data validation, and standardization of administrative routines. Responsible for digital travel records and decision-making support, as well as monitoring internal requests and processes, ensuring organization, clarity, and traceability of information.

Back-end Developer Intern

Fasters Soluções em Tecnologias

2022

Worked with data modeling and manipulation using PostgreSQL, including the creation and maintenance of database structures. Developed back-end integrations using TypeScript, ensuring efficient and organized communication between the database and application.

Front-end Developer Trainee

Turing Technology Factory, Anápolis – GO, Brazil

2021 – 2022

Contributed to the development of Unisecurity, an internal system developed at the university's software development lab, working on new features and general improvements. Developed responsive web interfaces following front-end best practices. Improved application usability and performance, with a focus on user experience and technical efficiency.

Education

- **Bachelor's Degree in Software Engineering** — UniEvangélica, Anápolis – GO, Brazil 2021 – 2025

Projects

- Developed landing pages and web interfaces focused on responsiveness, usability, and UI/UX best practices.
- Built modern web pages using HTML, CSS, JavaScript, and React, applying clean design, reusable components, and optimization for different devices.
- Developed and integrated a database for an agricultural company's website, creating routes, connections, and data structures to enable efficient data storage and retrieval.
